

Everything a map needs  
from Apple Maps  
Search for location, etc

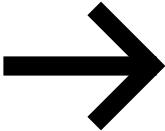

Swiping up to  
show the  
menu

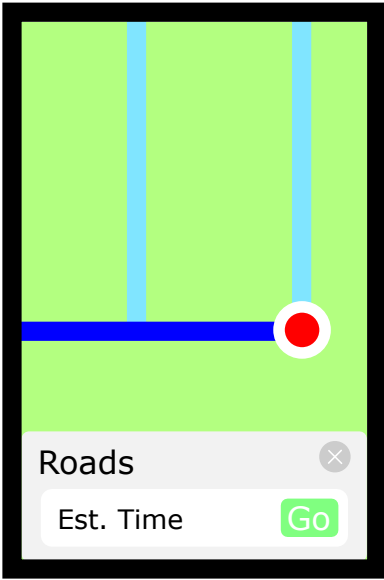

Tapping on Location 1

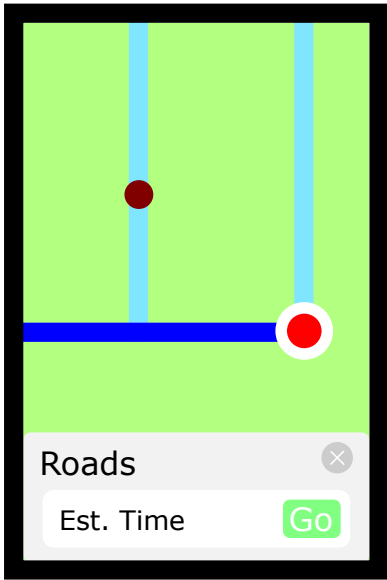

Just like any other  
mapping application

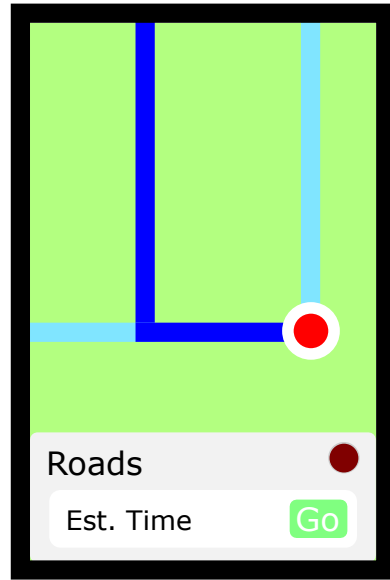

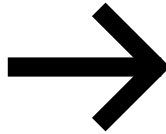

Tapping on Route 1  
Any other route will  
get a similar result

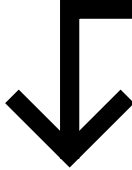

Get optimized routes  
based on travel time

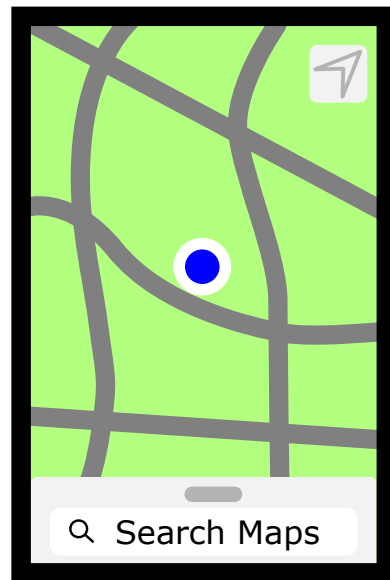

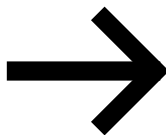

Tapping on a road to change the route

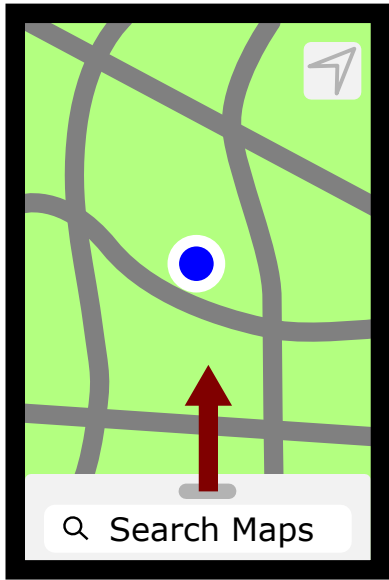

Press GO to start navigation  
But for now lets go back to the map

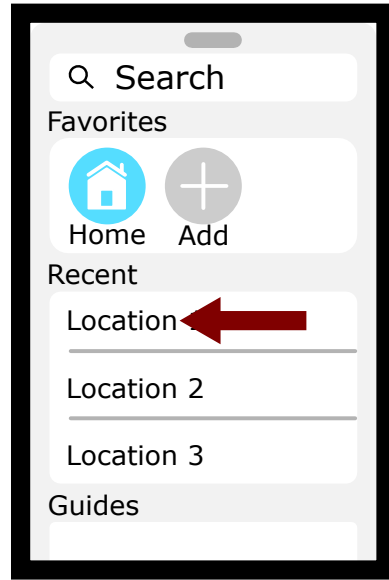

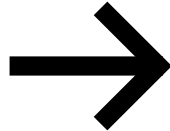

Tapping on the X again to go back to the map

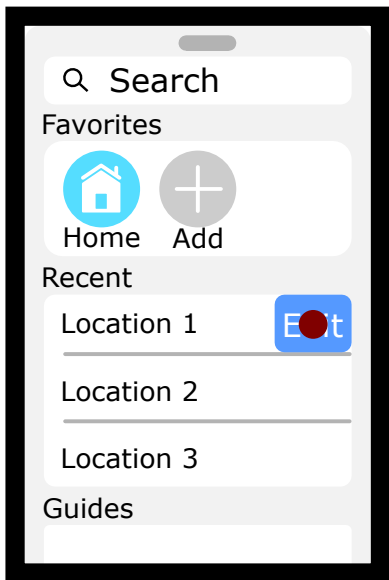

Swiping up to show the menu again

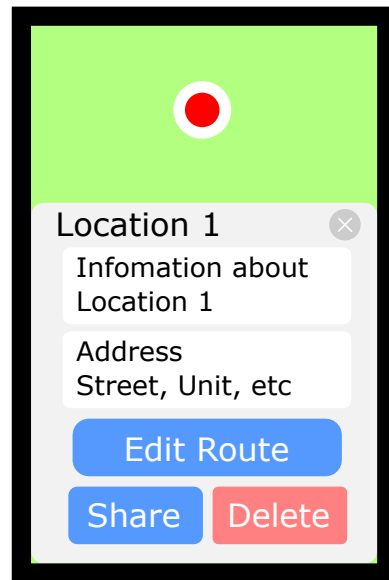

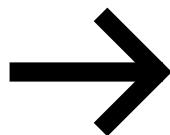

Swipe left on a location to show the edit button

A button to edit the route which goes back to a screen similar to screen 4

Tapping the edit button

Buttons to share the route through native sharing and delete the route from the app
